i am getting ready for my A320 initial FFS lesson 6 within which adr 1+3 fault scenario is included. it does say clearly in the fcom abn that during this fault, landing gear has to be gravity extended and also that retraction is inhibited. i did search the fcom and previously discussed threads regarding the same topic but they don't really say why.

## **GENERAL INFORMATION**

If you look at FCOM 3.04.10,pg 2, you can see that F speed is the minimum speed at which the flaps may be retracted at takeoff and it is the same value for both flap 2 or 3, so really there is no point in "going" flap 2 when you already have speed for flap 1.
